DETAILED ACTION

Allowable Subject Matter

1. Claims 3-7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:
Prior art failed to establish InAs/GaAs quantum dot light emitting diode with the required dopant concentration.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 2 rejected under 35 U.S.C. 103(a) as being unpatentable over Petroff et al. (2002/0162995) in view of Matsuyama (JP 2002237456) further in view of Fritz et al. (5,780,867).

Regarding Claims 1 and 2, Petroff et al. disclose a mid infrared and near infrared light upconverter using self-assembled quantum dots where in Fig. 1G, GaAs layer 114, barrier layer 106, InAs layer 108, quantum well layer 110, AlGaAs spacer layers 102 and 113. Petroff fails to disclose the required Si-doped GaAs substrate and the required shutter/epitaxy structure. However, Matsuyama discloses a semiconductor device and its manufacturing method where in where in Fig. 2, layer 20 is silicon doped GaAs.

Art Unit: 2826

Futhermoer, Fritz et al. disclose a broadband light-emitting diode where in paragraphs 27, 28 and 30 and in Fig. 6 the required shutter/epitaxy structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required GaAs substrate structure and the required shutter/epitaxy structure in Petroff et al. as taught by Matsuyama and Fritz et al. respectively in order to have a quantum dot light emitting diode with higher performance.
